CARE GUIDE

For LIND DNA products in high-quality recycled leather

The bedrock of most LIND DNA products is high-quality recycled leather, made of 80% hard leather and 20% natural rubber from trees. Dyed and decorated with beautiful surface structures and patterns. Designed and manufactured in Denmark.

With more than a thousand different variations of surfaces, shapes and colours, LIND DNA offers the largest selection of table mats in high-quality recycled leather on the international market. There is one for every taste, every table and every home.

WE: DESIGN, CREATE & PRODUCE IN DENMARK

CARE GUIDE

For LIND DNA products in high-quality recycled leather

To maintain the beautiful appearance and the quality characteristics of your LIND DNA products in recycled leather, it is important that you treat them correctly. The following steps will tell you how:

- Clean your product with a damp cloth and LIND DNA's cleaning spray CLEAN&CARE. Do not put your product in the dishwasher. Do not soak any of your products in water or soap.
- Avoid stains from certain foods and liquids, such as curry, saffron, paprika, chili, and red wine. They may leave permanent stains, especially on lighter colours.
- Do not place hot items, such as pots and frying pans on your products.
- Do not fold your recycled leather products.
- Avoid exposure to direct sunlight for longer periods of time.
- Make sure to place your product on dry and plain surfaces only. Be careful with oil-treated tables, as excess oil might be absorbed by your recycled leather product.
