frame | shelving system

design by Cane-line Design Team

Frame is a flexible shelving system, which can be modified, extended and rebuilt to match and reflect your storage needs at any time. The system consists of individual elements, which can be assembled and combined according to your personal requirements.

Frame shelving system low Frame shelving system high Frame shelving system complete Frame tea trolley

The system consists of individual elements, which can be assembled and combined according to your personal requirements. The Frame tea trolley can't be combined.

The Frame base units can all be combined and the wide range of accessory component allows for easy extension in every direction. Frame is developed to be used both indoors and outdoors – and can be left outdoors all year round thanks to its weather-resistant materials and construction. Frame is designed by the Cane-line Design Team.

Frame is made of all-weather, powder-coated aluminium. The Frame shelves come in anthracite grey or white, with feet and space dividers in WWF®-certified teak.

Cane-line Teak is supplied from WWF/GFTN, certified members in Indonesia, whose teak originates from Perhutani and comes from responsible managed forests.
