

Care and cleaning of Recacril® fabrics

The high-tech finish, Infinity Process, provides RECacril® RECASENS fabrics with long-lasting protection against mold and mildew, excellent water and oil repellency, making RECacril® fabrics protect you from both sun and water for many years.

However, the accumulation of dust, air pollution particles, organic materials, fatty substances and dirt in general can damage this protection, shortening the life of RECacril® fabrics, which makes their removal necessary.

The most effective method to keep RECacril® fabrics in good condition is to clean the fabric once a month with a hose with little pressure, thus preventing the accumulation and penetration of dirt on the canvas.

It is very important that after cleaning with water, the canvas is allowed to dry completely before closing the awning.

In case of rain you can leave the awning extended, since it will drag dirt. If under any circumstance the wet awning had to be closed, it should be opened again as soon as possible and allowed to dry completely. In times of heavy rain it is advisable to keep the awnings closed.

If this washing is carried out periodically with water, in most environments, it will only be necessary to do a more thorough cleaning process every 2 or 3 years.

Normal cleaning:

1. Brush the dirt with a very soft brush. NEVER brush with hard brushes since they damage the protective treatment of the fabric.
2. Spray the awning fabric with clean water. If a hose is used, avoid using high pressure.

3. Prepare a solution of neutral soap in warm water (no more than 40 °C) and apply it on the fabric.
4. Rub with a soft brush allowing the solution to penetrate the textile.
5. Rinse with plenty of clean water to remove all soap residue.
6. Let dry in the open air and do not roll up the awning until the fabric is completely dry.

If the stains persist, it will be necessary to perform a more intense cleaning following the following procedure:

Intensive cleaning:

1. Brush the dirt with a very soft brush. NEVER brush with hard brushes since they damage the fabric finish.
2. Prepare a solution with 10% household bleach, 20% neutral soap (solvent free) and 70% water.
3. Apply the solution on the textile, allowing it to act for a maximum of 15-20 minutes.
4. Rinse with plenty of clean water to remove all soapy debris, since if residues of bleach remain in the fabric, with the combined action of the sun, they could end up damaging it.
5. Let dry in the open air and do not roll up the awning until the fabric is completely dry.
6. Repeat the above process if necessary.

To protect the environment, be sure to collect dirty water when using bleach, as it can be harmful to people, animals and plants.

Certificate of WARRANTY of Recacril® fabrics

RECASENS Recacril® fabrics are covered by a warranty for a period of 5 years from the date of purchase.

The WARRANTY covers the abnormal deterioration, rot and loss of color of Recacril® fabrics subject to normal environmental conditions and on which a proper maintenance has been systematically performed.

The WARRANTY covers only the value of Recacril® fabrics and specifically excludes any other element of the application in which it is installed (hardware, mechanisms, etc.), as well as the costs of making and installing said application.

The WARRANTY does not cover any deterioration due to abuse, neglect, vandalism, burns of any kind, fires and natural disasters.

In particular, it does NOT cover the deterioration caused by:

- The lack of maintenance of the fabric or its use of inappropriate products or instruments. In particular, NEVER use solvents or hard brushes or other scraping instruments that can damage the protective treatment of Recacril® fabrics.

- Environmental or phytosanitary pollution.
- Organic dirt produced by animals.
- Assembly defects or user maneuver errors.
- Placing objects on top of the fabric, or dropping objects on it.
- Unusual atmospheric conditions (rays, storms, etc.).

The WARRANTY excludes the cost of any mechanical device (machinery, mechanisms, structures, etc.), as well as any manufacturing, assembly and installation costs.

The replacement or reimbursement of defective tissue does not imply an extension of the WARRANTY of the replacement fabric.

Recacril® fabrics are a component of the final product. In case of detecting any kind of defect in the fabric, please contact your installer or distributor from whom you purchased the product.
